

ClimateScopes Dashboard Design

Dashboard Structure Overview

This document explains the layout and structure of the ClimateScope interactive dashboard. The diagram below shows the exact placement of filters, KPI indicators, and visualizations so that reviewers can clearly understand how the dashboard is organized.

Component Explanation

1. Dashboard Title

The top section displays the title 'ClimateScope Weather Dashboard', which identifies the purpose of the dashboard.

2. KPI Cards

Below the title, three KPI cards summarize key indicators: Average Temperature, Average Humidity, and Average Wind Speed. These values update dynamically based on selected filters.

3. Filters Section

The left panel contains interactive filters for Country, Year, and Month. Users can select one or multiple values to explore specific parts of the dataset.

4. Global Temperature Map

This map visualization shows how temperature values are distributed across countries. It provides a geographic overview of climate conditions.

5. Monthly Temperature Trend

A line chart displays how temperature changes across different months, helping identify seasonal patterns.

6. Top Hottest Countries

A bar chart compares countries with the highest recorded temperatures in the dataset.

7. Wind Speed Analysis

This chart compares wind speed values across different regions.

8. Temperature vs Humidity Relationship

A scatter plot is used to analyze the relationship between temperature and humidity values.
